

The following graphs are raw vehicle counts at the MDE Howard County Near-Road site at the I-95 Rest Stop near Beltsville, MD. A laser traffic counter is able to distinguish between vehicle types as well as get a count of total vehicles across all 8 lanes of traffic on I-95. Vehicle speed is also available upon request. Raw values are taken at 1-minute intervals. The data shown below are summed counts of vehicular traffic for different times of day by different types of vehicle.
