

File Revision Date:

October 2020

Data Set description:

PI: Axel Murk
Institute of Applied Physics
University of Bern, Switzerland
Instrument: MIAWARA-C (Middle Atmospheric WATER vapour RAdiometer for Campaigns)
Site: Ny-Alesund
Measurement Quantities: Water vapour profiles

Contact Information:

Name: Axel Murk
Address: Institute of Applied Physics
University of Bern, Switzerland
Sidlerstr. 5
CH-3012 Bern, Switzerland
Phone: +41 31 631 86 74
Email: axel.murk@iap.unibe.ch

Instrument description:

MIAWARA-C, the MIddle Atmospheric WAter vapour RAdiometer for Campaigns, is a ground-based microwave radiometer built at the University of Bern and specially designed for campaigns. It is therefore a very compact instrument which only needs a power connection and an Internet connection and which is operated remotely. The instrument front end is an uncooled heterodyne receiver with a system temperature of 150 K. In the back end the signal is spectrally analysed with an FFT spectrometer with 400MHz bandwidth and 30.5 kHz spectral resolution. The instrument measures the pressure-broadened emission line of water vapour at 22 GHz.

Retrieval algorithm:

The retrieval of the water vapour profiles from the spectra is performed with QPACK (Eriksson et al., 2005) and ARTS2 (Eriksson et al., 2011), using an optimal estimation method (Rodgers, 1976). An a priori water vapour profile is required for the optimal estimation method and is taken from an MLS climatology of the years 2004–2008. The retrieved water vapour profiles have an altitude range of 37–75km with a vertical resolution of 12–19 km. The time resolution is 24 hours.

Accuracy:

MIAWARA-C water vapour profiles from Ny-Alesund were intercompared with satellite measurements and model data for a 3 year period starting in September 2015 (Schranz et al. 2019). On average SD-WACCM and ACE-FTS are within $\pm 5\%$ of the MIAWARA-C water vapour measurements up to 0.1 hPa (about 60 km). The EOS-MLS measurements have however a constant offset to MIAWARA-C over the 3 years, which is on average 10%–15% depending on altitude. In the mesosphere this offset was already seen when MIAWARA-C was located at Bern and Sodankylä for 2012–2013 (Tschanz et al., 2013)

Instrument History:

Located at Ny-Alesund since September 2015
